

LYBRA ENVIRONMENTAL COMMITTEE

A joint industry initiative of Water Revolution Foundation and the Leading Yacht Brokers Association (LYBRA)

WHAT IS LYBRA?

The Leading Yacht Brokers Association, is an internationally renowned trade association for leading superyacht brokerage companies to set new universal quality standards.

WHAT IS THE ENVIRONMENTAL COMMITTEE?

A joint initiative of Water Revolution Foundation and LYBRA, initiated by leading management and brokerage firms to track emissions and environmental impact across the fleets they represent.

HOW WILL IT HELP TOWARDS IMPROVING THE INDUSTRY?

The superyacht industry is under growing pressure to show, not just claim, its environmental progress. Regulators, owners and charterers increasingly expect credible data behind sustainability commitments. Yacht management companies and brokers can shape policy, institutions, and commitments together, and take an active part in self-regulating an environmental future.

DELIVERABLES AND GOALS

A shared sustainability database. Collect and consolidate sustainability data across the fleet, with particular focus on charter-day information and operational data such as engine and generator hours.

Alignment with regulation. Monitor developments from the IMO, SYBAss and ISO, and keep the LYBRA data project aligned with emerging sustainability and reporting requirements.

A growing data pool. Engage additional yacht management companies and expand the network of participating companies, to broaden participation and strengthen the dataset.

Connection to the wider industry. Stay engaged with Water Revolution Foundation's broader network, training initiatives and wider industry activities that support the industry Roadmap to net-zero in 2050.

JOIN THE COMMITTEE

If your company is a LYBRA member and not yet part of the Environmental Committee, we welcome you to join. Get in touch with Water Revolution Foundation or LYBRA to find out how to take part.
